

New thought-through turnkey solution for the HAPPY REHAB system: the PRO+ package.

- the perfect solution for your institution, clinic or health and exercise center!

The new PRO+ package makes everyday life with HAPPY REHAB even easier. The PRO+ package is an integrated and complete solution that matches the system perfectly both in terms of operation and design. Aside from the large 43" screen the package also consist of a fixed controller (powerful minicomputer), a wireless computer mouse and storage room for the system's power supply.

Additional cables are elegantly fixed to the back of the stander. During exercise with HAPPY REHAB the ergonomics of the user is important.

With the PRO+ package the screen is removed from the table, up in eye-height. The built-in gas springs enables easy adjustment of the height of the screen for different users without any tools.

The four large revolving wheels makes the system completely mobile, and easy to move. All wheels are lockable, which safeguards against unintended movement. The system is aesthetic, robustly designed and stands safely and steadily on the floor.
